

L^AT_EX Guidelines for Author Response

001

A. Introduction

002 After receiving paper reviews, authors may optionally submit
 003 a rebuttal to address the reviewers' comments, which
 004 will be limited to a **one page** PDF file. Please follow the
 005 steps and style guidelines outlined below for submitting
 006 your author response.

007 The author rebuttal is optional and, following similar
 008 guidelines to previous conferences, is meant to provide you
 009 with an opportunity to rebut factual errors or to supply ad-
 010 ditional information requested by the reviewers. It is NOT
 011 intended to add new contributions (theorems, algorithms,
 012 experiments) that were absent in the original submission
 013 and NOT specifically requested by the reviewers. You may
 014 optionally add a figure, graph, or proof to your rebuttal to
 015 better illustrate your answer to the reviewers' comments.

016 Per a passed 2018 PAMI-TC motion, reviewers should
 017 refrain from requesting significant additional experiments
 018 for the rebuttal or penalize for lack of additional experi-
 019 ments. Authors should refrain from including new experi-
 020 mental results in the rebuttal, especially when not specif-
 021 ically requested to do so by the reviewers. Authors may
 022 include figures with illustrations or comparison tables of re-
 023 sults reported in the submission/supplemental material or in
 024 other papers.

025 Just like the original submission, the rebuttal must main-
 026 tain anonymity and cannot include external links that reveal
 027 the author identity or circumvent the length restriction. The
 028 rebuttal must comply with this template (the use of sections
 029 is not required, though it is recommended to structure the
 030 rebuttal for ease of reading).

A.1. Response length

031 Author responses must be no longer than 1 page in length
 032 including any references and figures. Overlength responses
 033 will simply not be reviewed. This includes responses where
 034 the margins and formatting are deemed to have been sig-
 035 nificantly altered from those laid down by this style guide.
 036 Note that this L^AT_EX guide already sets figure captions and
 037 references in a smaller font.

B. Formatting your Response

040 **Make sure to update the paper title and paper ID in the**
 041 **appropriate place in the tex file.**

042 All text must be in a two-column format. The total allow-
 043 able size of the text area is $6\frac{7}{8}$ inches (17.46 cm) wide by $8\frac{7}{8}$
 044 inches (22.54 cm) high. Columns are to be $3\frac{1}{4}$ inches (8.25
 045 cm) wide, with a $\frac{5}{16}$ inch (0.8 cm) space between them. The
 046 top margin should begin 1 inch (2.54 cm) from the top edge
 047 of the page. The bottom margin should be $1\frac{1}{8}$ inches (2.86
 048 cm) from the bottom edge of the page for 8.5×11 -inch pa-

Figure 1. Example of caption. It is set in Roman so that mathematics (always set in Roman: $B \sin A = A \sin B$) may be included without an ugly clash.

per; for A4 paper, approximately $1\frac{5}{8}$ inches (4.13 cm) from
 the bottom edge of the page.

Please number any displayed equations. It is important
 for readers to be able to refer to any particular equation.

Wherever Times is specified, Times Roman may also be
 used. Main text should be in 10-point Times, single-spaced.
 Section headings should be in 10 or 12 point Times. All
 paragraphs should be indented 1 pica (approx. $\frac{1}{6}$ inch or
 0.422 cm). Figure and table captions should be 9-point Ro-
 man type as in Fig. 1.

List and number all bibliographical references in 9-point
 Times, single-spaced, at the end of your response. When
 referenced in the text, enclose the citation number in square
 brackets, for example [1]. Where appropriate, include the
 name(s) of editors of referenced books.

To avoid ambiguities, it is best if the numbering for equa-
 tions, figures, tables, and references in the author response
 does not overlap with that in the main paper (the reviewer
 may wonder if you talk about Fig. 1 in the author response
 or in the paper). See L^AT_EX template for a workaround.

B.1. Illustrations, graphs, and photographs

All graphics should be centered. Please ensure that any
 point you wish to make is resolvable in a printed copy of
 the response. Resize fonts in figures to match the font in the
 body text, and choose line widths which render effectively
 in print. Readers (and reviewers), even of an electronic
 copy, may choose to print your response in order to read
 it. You cannot insist that they do otherwise, and therefore
 must not assume that they can zoom in to see tiny details on
 a graphic.

When placing figures in L^AT_EX, it is almost always best to
 use `\includegraphics`, and to specify the figure width
 as a multiple of the line width as in the example below

```
\usepackage{graphicx} ...
\includegraphics[width=0.8\linewidth]
  {myfile.pdf}
```
